ABOUT ME

I have always been a strange mix of creative and analytical, but have struggled to find where that duality can coexist. As a musician I am been able to explore my creativity, and in my business ventures I have been able to pour over details and strategy, but I have been unable to marry the two.

As a software developer, I am able to use my whole self to solve problems. I have the opportunity to come up with a creative solution, while at the same time, dive deep into the details in order to bring that solution to life.

EXPERIENCE

FULL STACK SOFTWARE DEVELOPER

Nashville Software School | 2018 to 2019

A six month, full stack software development boot-camp

- Hands on application of OOP fundamentals through group and individual projects reflecting real world business problems
- Source code version control with Git/GitHub and Project Managing/tracking with Github Projects
- JavaScript fundamentals using DRY, modular, readable code and reusable components
- Using React, HTML, CSS and jQuery, built browser-based single page applications
- Task Automation with Grunt: Linting with ESLint, module bundling with Browserify
- Experience using Bootstrap, Bulma and CSS to style web applications
- Leverage SQL to build and interact with databases
- Utilize Python and Django to build MVT web applications
- Experience using Django REST to build an API
- Experience building applications using test driven development

Group Projects:

Mission Control is a single page responsive CRUD web application built with JavaScript. Mission Control was designed to bring several aspects of online interaction together in one application. In it a user can manage their tasks, store articles, manage their events, add friends and allow the user to message other users. I had a role in all aspects of this project but was predominantly focused on building out the events page.

github.com/nss-mission-control/nutshell

ReactShell is a single page responsive CRUD web application built with React and Bulma. ReactShell was designed to bring several aspects of online interaction together in one application. In it a user can manage their tasks, store articles, manage their events, add friends and allow the user to message other users. I was responsible for the tasks page which implemented a Trello like drag and drop functionality.

reactshell.herokuapp.com

Bangazon E-commerce is built with Python, Django and Bootstrap. This application allows users to buy and sell products, rate previous purchases, favorite sellers, and recommend products to other users. I had a hand in many aspects of this project but was predominantly focused on building the user settings page and photo upload for new products.

EDUCATION

Nashville Software School

Full Stack Development

Olivet Nazarene University

Business Administration and Music

CAPSTONE

Song-Share is a single page responsive CRUD web application built with React.js and Bootstrap that reduces the barriers between publishers and songwriters. Song-Share allows songwriters to upload songs, build playlists and privately share those playlists with a publisher. A publisher can then hear each song on the playlist in one page and read pertinent information on each song.
